What makes us happy?

Nico Katzke[a]

[a]*Satrix, Cape Town*

Abstract

This article aims to discuss what makes us happy. This is a suggested solution to question 1.

1. Introduction

You are welcome to add some sort of an introduction here. Spend 5 minutes detailing the purpose here, e.g.

Look at the README.txt file and maybe give some background - especially also in understanding the definition of the variables.

Figure 1.1: Happiness Ladder.

Let's start a newpage here, just because. Notice that I created a parameters to play around with xaxis labels.

Barplot making up the ladder
Look at the colours – wow.

Figure 1.2: Happiness Ladder.

Try sprucing up the above figures even more, as well as adding some interpretation of the figures here.

As you can see from Figure 1.1, happiness is not perfectly correlated with life expectancy. Maybe posit some theory here and reference a paper to show that you can do this as well. If you do that, just keep in the bibliography information of course - as I didn't cite anyone here, I omitted it.
